Employment

Feb 2009 - Present / Web Designer - Developer / ORCA Websites

Originally starting as a web designer I have since progressed further in to the realm of development.

In this role I have successfully managed many projects from the very start of their life, as a creative brief all the way through to pre-launch testing.

I have developed a range of jQuery based javascript functions whilst working at ORCA websites and significantly enhanced my technical skills. I am very experienced with cross browser testing and managing browser restrictions - graceful degradation and progressive enhancement; depending on clients' needs and the nature of the project.

Jul 2008 - Feb 2009 / Freelance Web Designer

I embarked on the big wide world of design straight after finishing my degree.

During this time I built on many skills, specifically flash animation and actionscript coding.

About Me

I am a young, enthusiastic person, with a passion for design and technology. I enjoy playing video games, mainly Halo, playing the guitar and listening to music.

I am an avid tennis fan, keeping up to date with the tour via the internet.

I have a keen interest in films and animation, manga and comics, I enjoy reading in all formats and am seriously engaged in Philip K. Dick novels.
